

Deskglider™

Deskglider™

The Deskglider access platform represents a real breakthrough in safe above desk access and has been developed to solve an industry wide issue of how to work above desks, tables and workbenches safely and efficiently and ensure compliance with the Work At Height Regulations.

Manufactured in lightweight aluminium the Deskglider is height adjustable with a maximum reach height of 4.00m. With a 900mm outreach, which allows an easy working reach of 1300mm, it simply glides over the desk top making access easy and more importantly safe.

Along with safe access over desks, the Deskglider can also be used as a free standing access tower making it a highly versatile and compact dual purpose work platform for a variety of work at height tasks. The Deskgliders small working footprint makes it ideal for working in corridors and confined spaces. The four point swivel castors offer sideways movement, a real benefit in congested areas.

Once in position, the Deskglider could not be simpler to use and to adjust to the required height.

Access through a single door

Easy Access to ACU and Lights

Freestanding inside

Comfortable Working Position

Freestanding outside

Access all areas

The Deskglider will prevent inconveniencing the user of the desk in many ways. The desk will not need to be cleared or computers, printers and telephones disconnected and the desk initially moved to do a simple job. In many cases above desk work has to be undertaken out of hours as to not disrupt a colleague or clients work, this means extra cost to someone. Cost aside the user of the desk may have to wait for sometime before normal working service is resumed, the same can apply with laboratory benches and school desks, now all this can be history with the Deskglider. The Deskglider need never be redundant, it can be purchased and used solely for use over desks but in fact it is more likely to replace the need for step ladders in any business or facility, a goal desired by nearly every work place.

Owning and operating the Deskglider access platform will eliminate the risk of falling and help achieve full compliance with the Work At Height Regulations, protecting management and the employer from litigation resulting from a preventable accident and at the same time keeping the client content, the employee safe and potentially increasing productivity and profits.
